# LightningFAX 7.5

ENTERPRISE FAX SERVER

Product Data Sheet

## Key Benefits

### Unified messaging integration.

Fax, email, data and voicemail<sup>†</sup> now share a common inbox, saving time, increasing worker efficiency and simplifying resource management.

**Keeps it simple.** Fax machines and fax modems require dedicated analog or trunk lines from your phone company. LightningFAX lets you consolidate your phone lines based on fax volume - and use them more efficiently.

**Leverages networks.** With Least Cost Routing, faxes can be redirected over a WAN to be transmitted by the server physically closest to the destination area code, saving on fax-related long distance costs.

**Saves money.** By fax-enabling desktop users, LightningFAX eliminates the waste of time, money and materials associated with traditional manual faxing, increasing productivity and ROI.

**24/7 Reliability.** Fax machines are slow, problematic and unreliable. LightningFAX makes faxing fast and stable with distributed processing, load balancing and failover support.

**Integrates seamlessly.** Fax from within all existing applications and groupware tools. ActiveX and API automation for enterprise apps. Use existing directories and phonebooks. Easy Windows Installer setup. Day-to-day admin tasks can be handled through native tools. Integrates network-ready multifunction printers (MFPs), too.

**LightningFAX** puts faxing at the fingertips of networked enterprise users. It enables rapid, secure sending and *Direct-To-Desktop Delivery* of mission-critical documents. Its advanced fax routing reduces telecom costs up to 40% or more over traditional fax.

**LightningFAX** improves worker productivity<sup>1</sup> by fax-enabling desktop applications. No waiting at the fax machine, no uncertainty about transmission success - with **LightningFAX**, faxing directly from any application is as *easy as printing*. Users send and receive faxes directly in their email client (or use our Web Client) and get instant notification of fax status. (Which means more time for work that *really* matters.)

**LightningFAX** easily integrates with enterprise applications via optional ActiveX and command-line API toolkits, to enable automatic faxing for tasks such as broadcasts, invoicing, document fax-back and more.

With optional 3rd-party applications, **LightningFAX** processes incoming faxes into machine-readable text for automated fax routing, data entry, forms processing, and text-to-speech applications such as Cisco Unity<sup>™</sup> Messaging's voice email-reader.

**LightningFAX Server** runs on Windows NT/2000. The SendFAX client can be deployed on Windows 95 and later. Non-Windows users (Mac OS, Linux, Solaris etc.) are supported via email and the Web. ■

Winning Supplier

## Main Features

- Up to 120 fax ports per server
- Scalable multi-server infrastructure
- Unlimited Users

## Windows Technologies

- Uses Windows Installer technology
- Supports Terminal Services and Citrix Metaframe
- Supports network installation
- Supports Windows Roaming Profiles

## Operating Systems

- Server: Windows NT/2000
- Native Clients: Windows 95/98/Me/NT/2000/XP
- Other operating systems supported via Web and email clients

## Email Gateways

- Domino/Notes 4.6 & R5
- Exchange/Outlook 5.5 & 2000
- SMTP/POP3 (ITU T.37 FoIP)
- SAP R/3 (BC-CON 4.0, 4.5 & 4.6)

## Automatic Routing Methods

- DID, DNIS, DTMF, ANI, & CSID
- Manual Attendant
- Line / Channel

## Document Conversion

LightningFAX uses applications to convert their native file formats. Fax from standard applications such as:

- Microsoft Office
- WordPerfect Suite
- Lotus SmartSuite
- HTML and RTF documents
- Notes forms

## Automation & Scripting

- ActiveX Control
- Batch file API
- E-mail command
- Feedback API

## Administrative Features

- Active Directory/Exchange integration through MMC Snap-In
- Notes-based fax administration
- Automatic user synchronization with Notes, Exchange and LDAP directories

- Remote monitoring and user management
- Graphical Fax Port Monitor
- Administration automation through scripting
- Exportable transaction logs

## Mission-Critical Features

- Fax auto archiving
- Billing Codes
- Extensive notification, deletion and printing options
- NT/2000 Clustering support
- Call restriction

## Productivity Features

- Scheduled or immediate transmission
- Access Outlook (MAPI), Notes or any ODBC contact database
- Fax Broadcasting
- Advanced phonebook search from the fax composition interface
- Drag & drop transmit
- Add text insertions, highlights, and stamps to faxes
- Custom Forms allow users to select coversheets and modify fax transmission settings in Outlook and Lotus Notes
- Rearrange pages in the fax composition interface

## Advanced Features

- Least Cost Routing
- Load Balancing
- Number Morphing
- Priority Scheduling

## Fax Clients

- Notes & Outlook (with or without custom forms and/or integrated SendFAX client)
- SendFAX standalone fax composition application
- Fax Manager application
- Coversheet Editor
- PhoneBook application
- Print-To-Email Driver
- Web faxing interface
- HP Digital Sending-enabled devices
- Multifunction printers with Scan-to-Email and/or T.37 functionality
- Any mail client (through SMTP)

## Minimum Requirements\*\*

- Up to 48 Channels: PIII 500MHz, 256MB, 30GB HD
- Up to 96 Channels: PIII 800MHz, 512MB, 40GB HD
- Up to 120 Channels: PIII 1.3MHz, 512MB, 50GB HD

*\*\*Separate rasterization server may be required depending on volume of fax traffic.*

## Supported Fax Hardware

- Supports Brooktrout, Dialogic / GammaLink, and other fax boards

## LightningFAX Also Available For:

- Red Hat Linux
- IBM AIX
- Sun SPARC Solaris
